

INO-EA GUI Quick Start Guide

Minimum Hardware Requirements

Process	1.67GHz CPU
Video	NVIDIA GeForce GPU (ex: MX150)
Memory	2GB RAM
Storage	500MB of available hard disk space
LAN	Gigabit Ethernet
Resolution	1366x768 display

Recommended Hardware Requirements

Process	2.0GHz CPU
Video	NVIDIA GeForce GTX series
Memory	4GB RAM
Storage	1GB of available hard disk space
LAN	Gigabit Ethernet
Resolution	1920x1080 display

OS and .NET Framework Requirements to Run GUI

Supported Operating System

- Microsoft Windows 7 SP1 (x86 and x64)
- Microsoft Windows 10 (x86 and x64)

The GUI requires .NET Framework 4.6.1 to work. It is Microsoft official resource. The link is below.

- **Appendix D: One More Step to Test High ER TRX (p.32)**
- **Appendix E: Resolution Matters (p.34)**
- **Appendix F: Set IP on Control PC (p.36)**
- **Appendix G: Firmware Upgrade (p.43)**
- **Appendix H: Tune Eye Diagram Scale (p.45)**

4 Steps to Measure Eye Diagram

1
Connect a Cat 6 Ethernet cable*
from control PC
to RJ45 port on the rear of chassis

2
Push power button on the front panel

3
Wait for initialization including
checking receiver, detecting network,
etc. 
Initialization is complete when IP
address appears**

*Recommended is high-performance Ethernet cable, for example, Cat 6

**If IP address does not appear after 5 min, it means the instrument is not connected to an Ethernet device yet. Please check the Ethernet cable and RJ45 port on PC.

Step 0 – Hardware Config. to Power On 2-CH EA

for 2-CH model

1

When using CH1, connect a Cat 6 Ethernet cable* from control PC to LAN1 port on the rear of chassis.

When using CH2, connect a Cat 6 Ethernet cable* from control PC to LAN2 port on the rear of chassis.

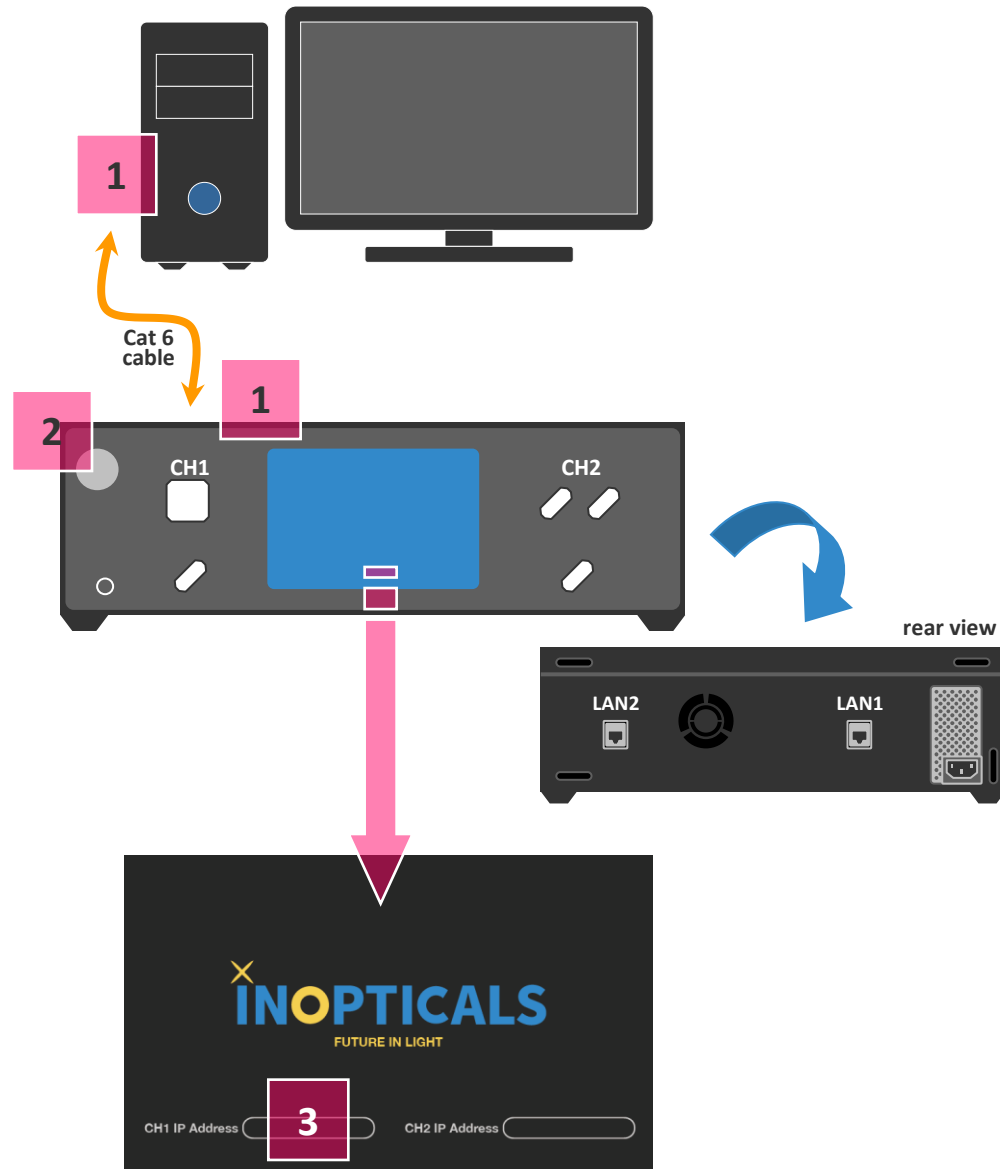

2

Push power button on the front panel

3

Wait for initialization including checking receiver, detecting network, etc.

Initialization is complete when IP address appears**

*Recommended is high-performance Ethernet cable, for example, Cat 6

**If IP address does not appear after 5 min, it means the instrument is not connected to an Ethernet device yet. Please check the Ethernet cable and RJ45 port on PC.

Step 1 – Link to Eye Analyzer

1

Input IP address of EA Analyzer Channel on GUI* ex: 172.16.8.20

ⓘ The IP is shown on chassis screen, when initialization is complete.

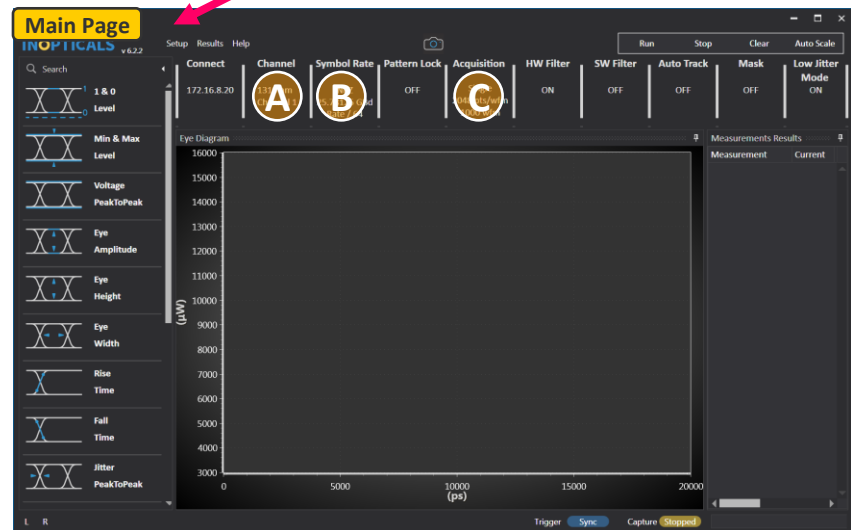

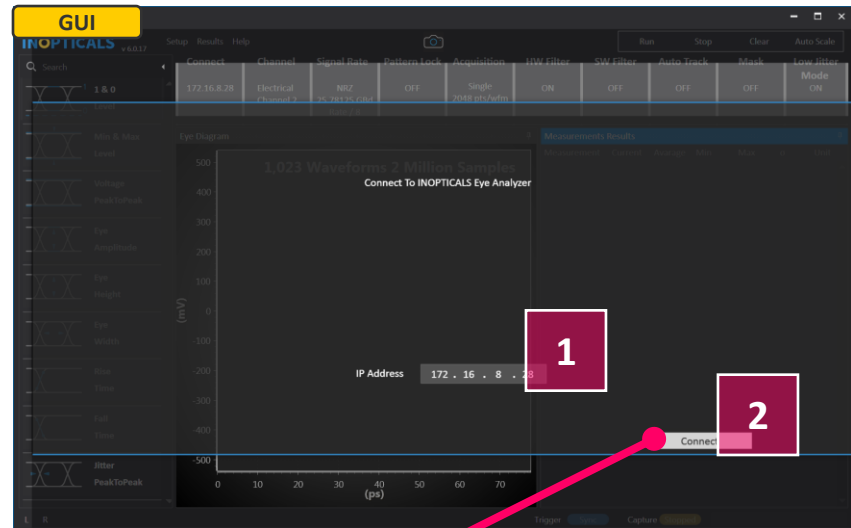

2

Press [Connect] button to enter main page

There are 3 main setups to enable eye diagram:

- A – Channel setup
- B – Symbol Rate setup
- C – Acquisition setup

*Example of control PC's IP= 172.16.1.10, and subnet mask = 255.255.0.0

1

Click [A] to select input signal type

- **Electrical** (signal into RF differential ports)
- **850nm** (Multimode Fiber)
- **1310nm** (Single Mode Fiber)
- **1550nm** (Signal Mode Fiber)

After type selection, channel no. is automatically indicated to test.

ⓘ Check if fiber/cable connects to the correct channel port or not.

2

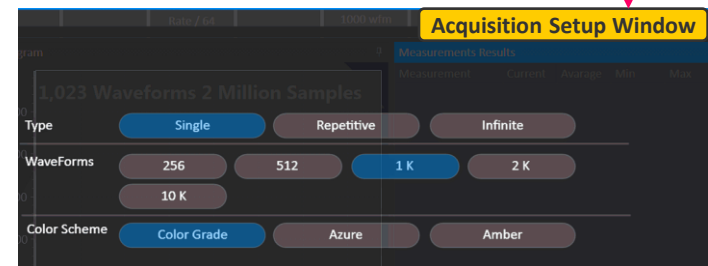

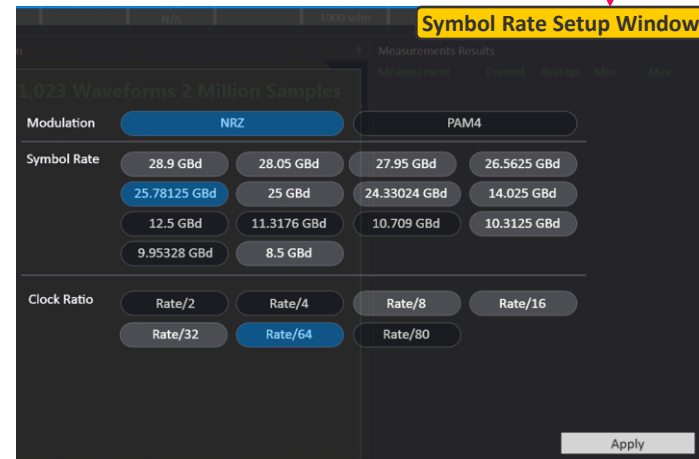

Click [B] to set the following items

- **Modulation**
- **Symbol Rate**
- **Clock Ratio**

3

Click [C] to set the following items

- **Acquisition Type**
- **Waveform Number**
- **Color Scheme**

Step 3 – Show Eye Diagram

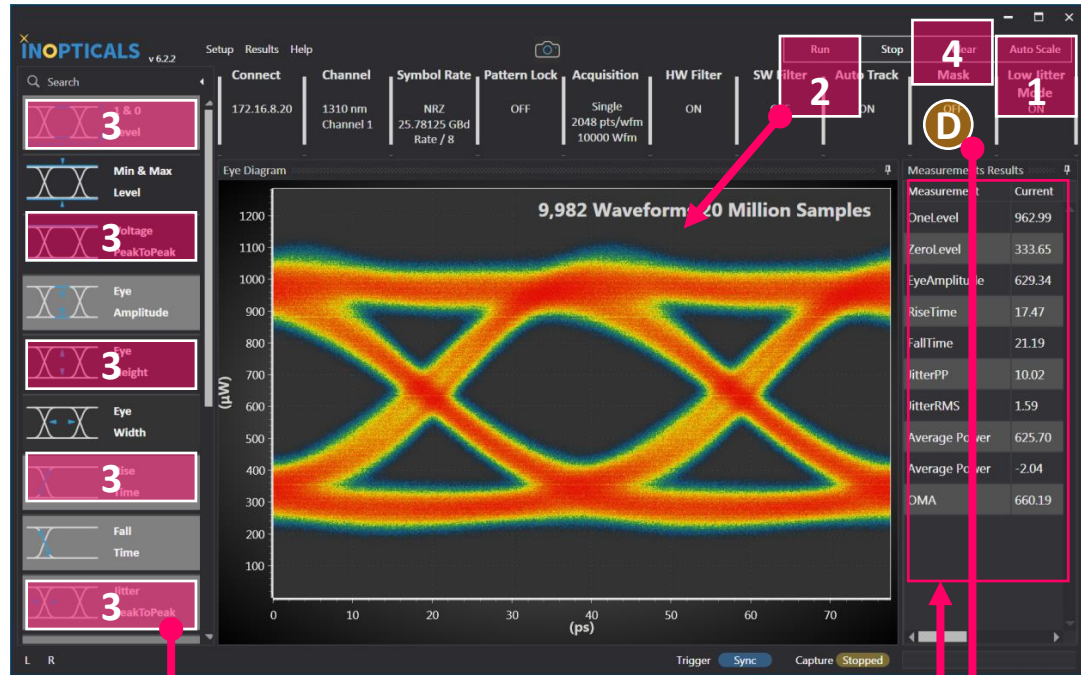

1
Click the button [Auto Scale]

2
Click the button [Run] to show eye diagram

3
Click Measurement Icons to enable them

4
Click [D] to set the following items to enable mask

- Mask Type
- Hit Ratio

GUI Indication

Screen Capture
Save GUI screen as PNG file

9,982 Waveforms 20 Million Samples

Number of total captured waveforms
Number of total sampling points

Slide the edge to tune the scale of eye diagram

Running Under capturing
Stopped Stopped capturing

Sync Clock Sync
LOL Loss of Lock

Provide clock signal into [Clock IN] port, and set correct symbol rate & clock ratio to get sync.

Measurement	Current
OneLevel	962.99
ZeroLevel	333.65
EyeAmplitude	629.34
RiseTime	
FallTime	
JitterPP	
JitterRM	
Average	
Average	
OMA	660.19

Advanced Guide

The screenshot shows the INOPTICALS v6.3.2.5 interface. At the top, there are tabs for 'Setup', 'Results', and 'Help'. Below the search bar, a table lists connection and channel details:

Connect	Channel	Symbol Rate	Pattern Lock
172.16.8.89	1310 nm Channel 1	NRZ 25.78125 GBd	OFF

The main area displays an Eye Diagram with a vertical axis labeled '(µW)' ranging from 100 to 1200 and a horizontal axis labeled 'Time' ranging from 0 to 15. Below the diagram, there are three rows of configuration options:

- Type:** Oscilloscope (selected), Single, Repetitive, Infinite
- WaveForms:** 256 (selected), 512, 1 K, 2 K, 10 K
- Color Scheme:** Color Grade (selected), Azure, Amber

Annotations in blue boxes provide further details:

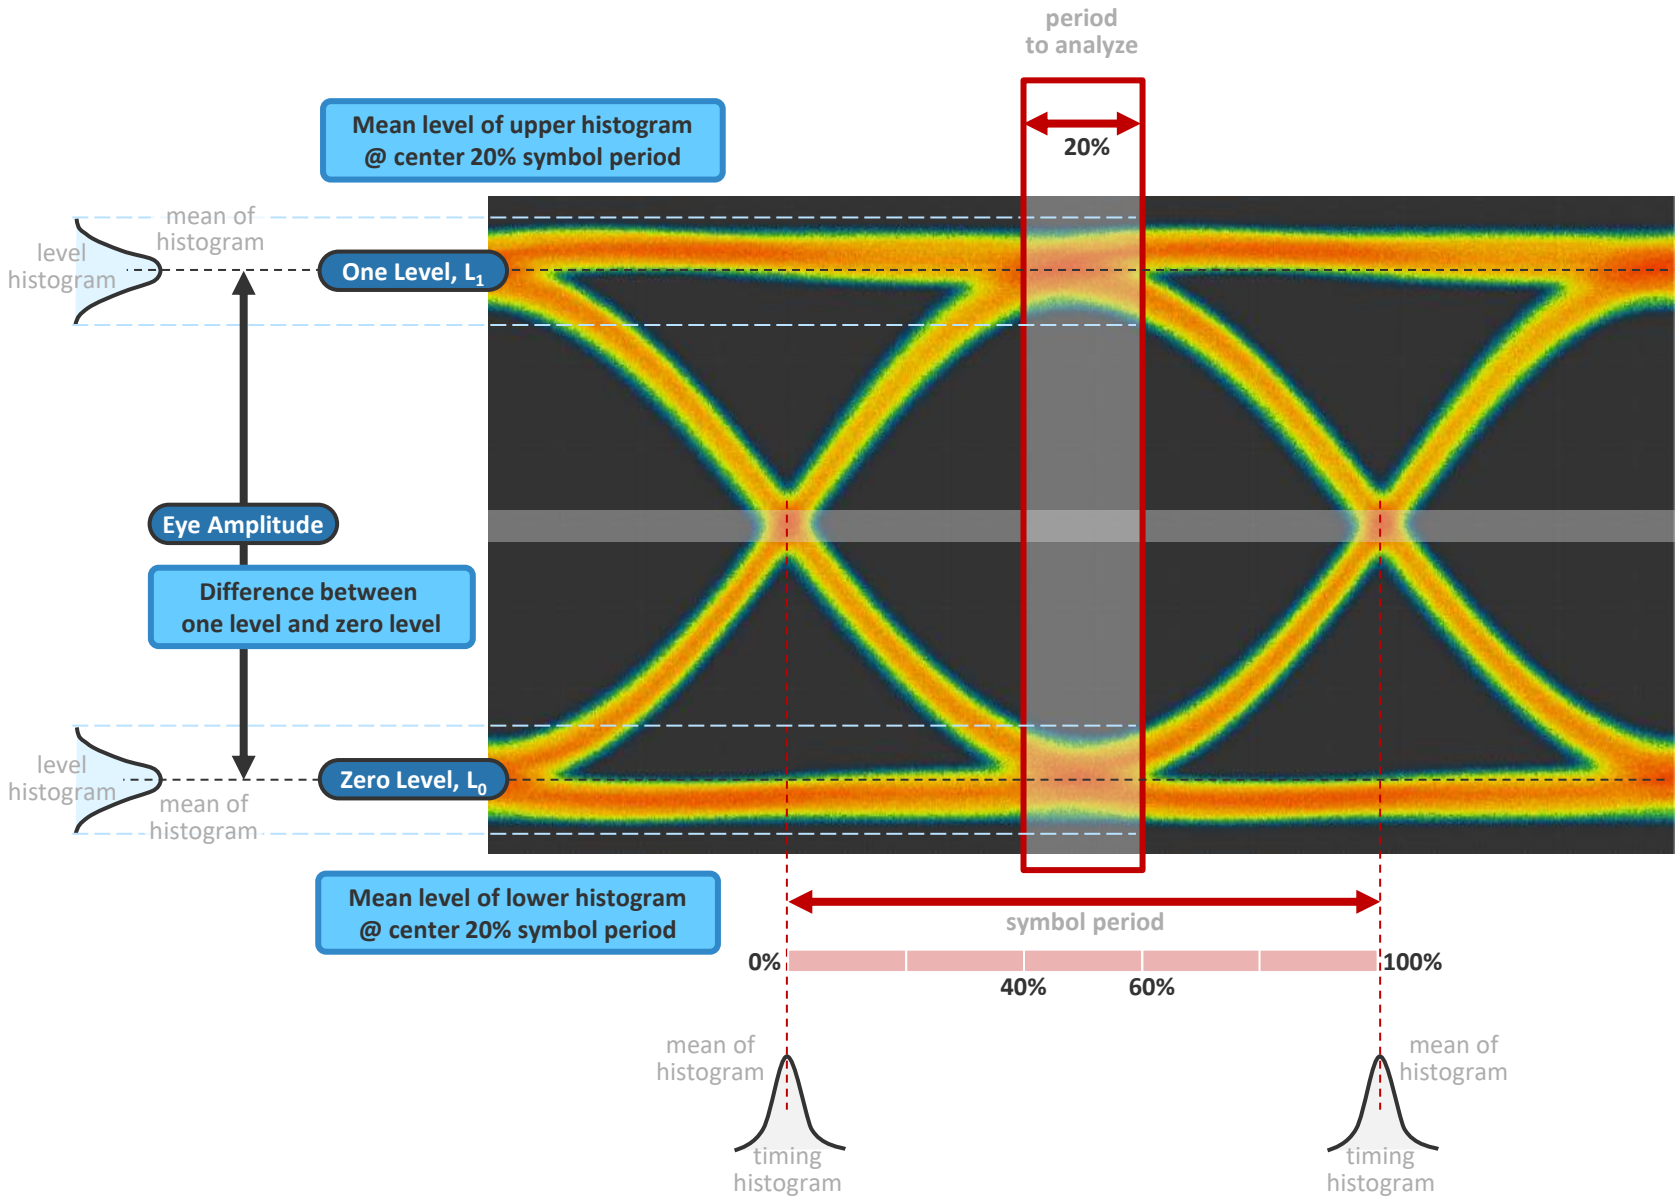

- Single:** Capture specified waveforms once
- Repetitive:** Repeat to capture specified waveforms and clean
- Infinite:** Nonstop waveform capture
- Oscilloscope:** Fast update mode, good for real-time tuning
- Specify how many waveforms to capture:** Points to the WaveForms selection row.
- Color Grade:** Show eye diagram in color grade
- Azure:** Show eye diagram in blue grade
- Amber:** Show eye diagram in yellow grade

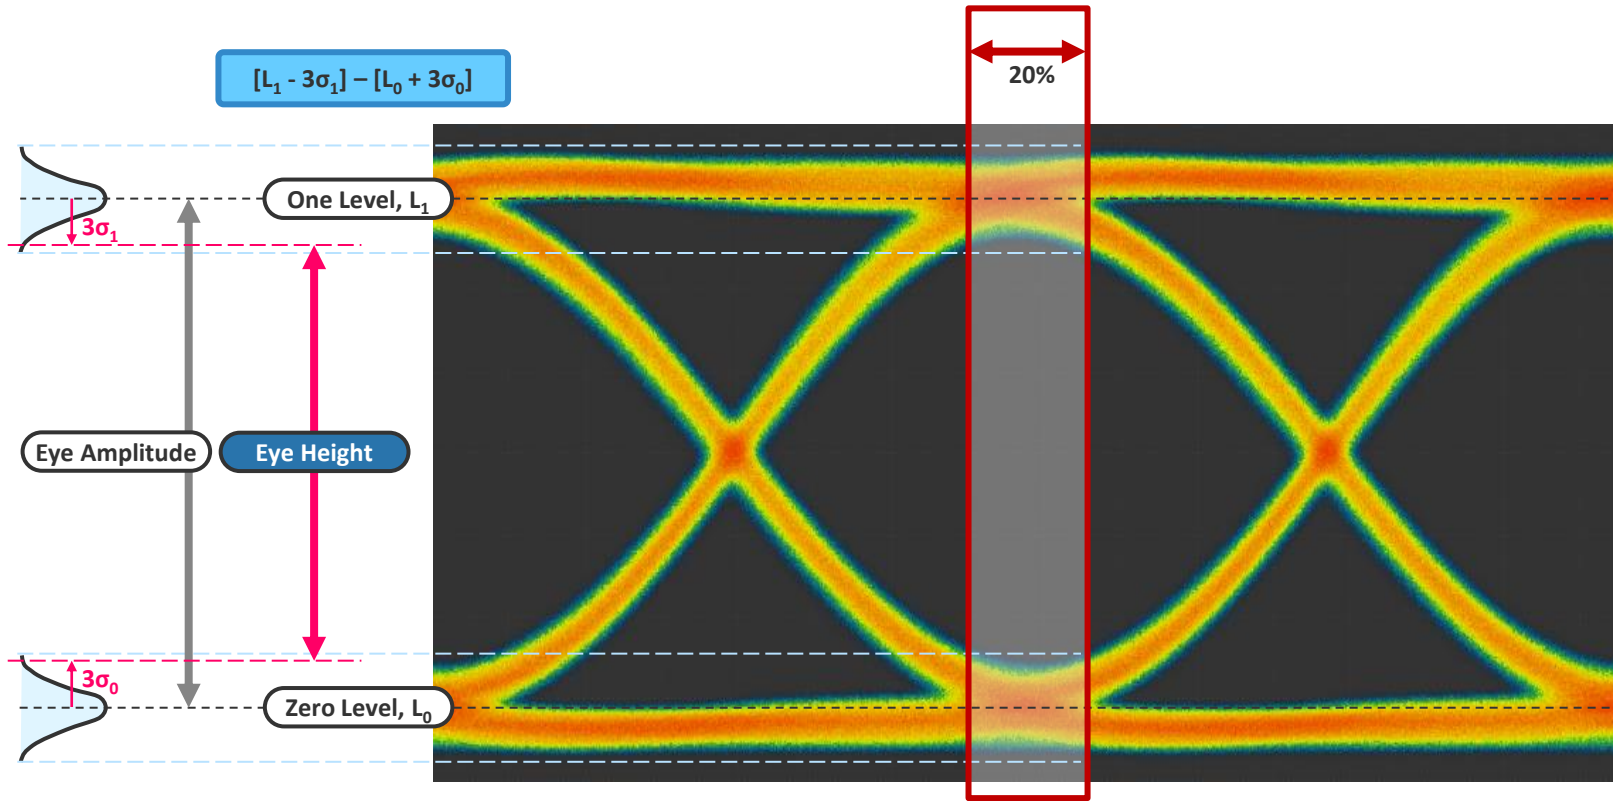

EA Mask Title	Full Name	Reference
4WDM Rx	100G 4WDM Rx	4-Wavelength WDM MSA
ER4 TX	100GBASE-ER4 Tx	IEEE Std 802.3ba-2010
LR4 TX	100GBASE-LR4 Tx	IEEE Std 802.3ba-2010
SR4 TX	100GBASE-SR4 Tx	IEEE Std 802.3ba-2010
SR4 RX	100GBASE-SR4 Rx	IEEE Std 802.3ba-2010
CLR4	100G-CLR4	based on 100GBASE-LR4
CLR4 FEC	100G-CLR4 FEC	
CWD4 TX	100G CWD4 Tx	CWD4 MSA
CWD4 RX	100G CWD4 Rx	CWD4 MSA
PSM4 RX	100G PSM4 Rx	PSM4 MSA, Parallel Single Mode 4 lane
SWDM4 RX	100G SWDM4 Rx	100G SWDM4 MSA
32GFC MM	32GFC MM Tx	FIBRE CHANNEL Physical Interface-6
32GFC SM	32GFC SM Tx	FC-PI-6
EDR Cable In	InfiniBand EDR Cable In	InfiniBand Trade Association
EDR Cable Out	InfiniBand EDR Cable Out	IBTA
25G LR	25GBASE-LR Tx	IEEE Std 802.3cc-2017
OUT4	OTU4	ITU-T G.959.1

Measurement Items

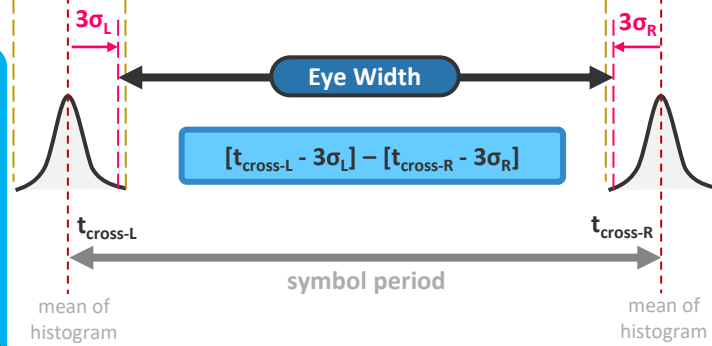

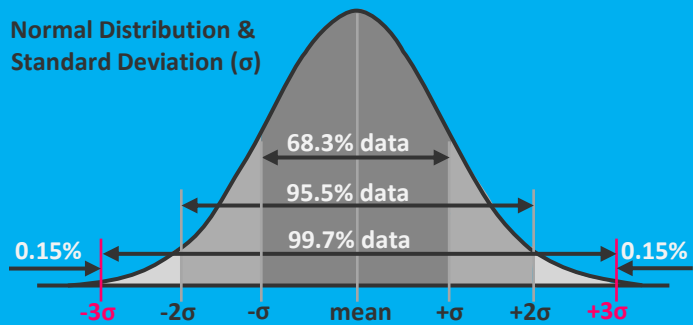

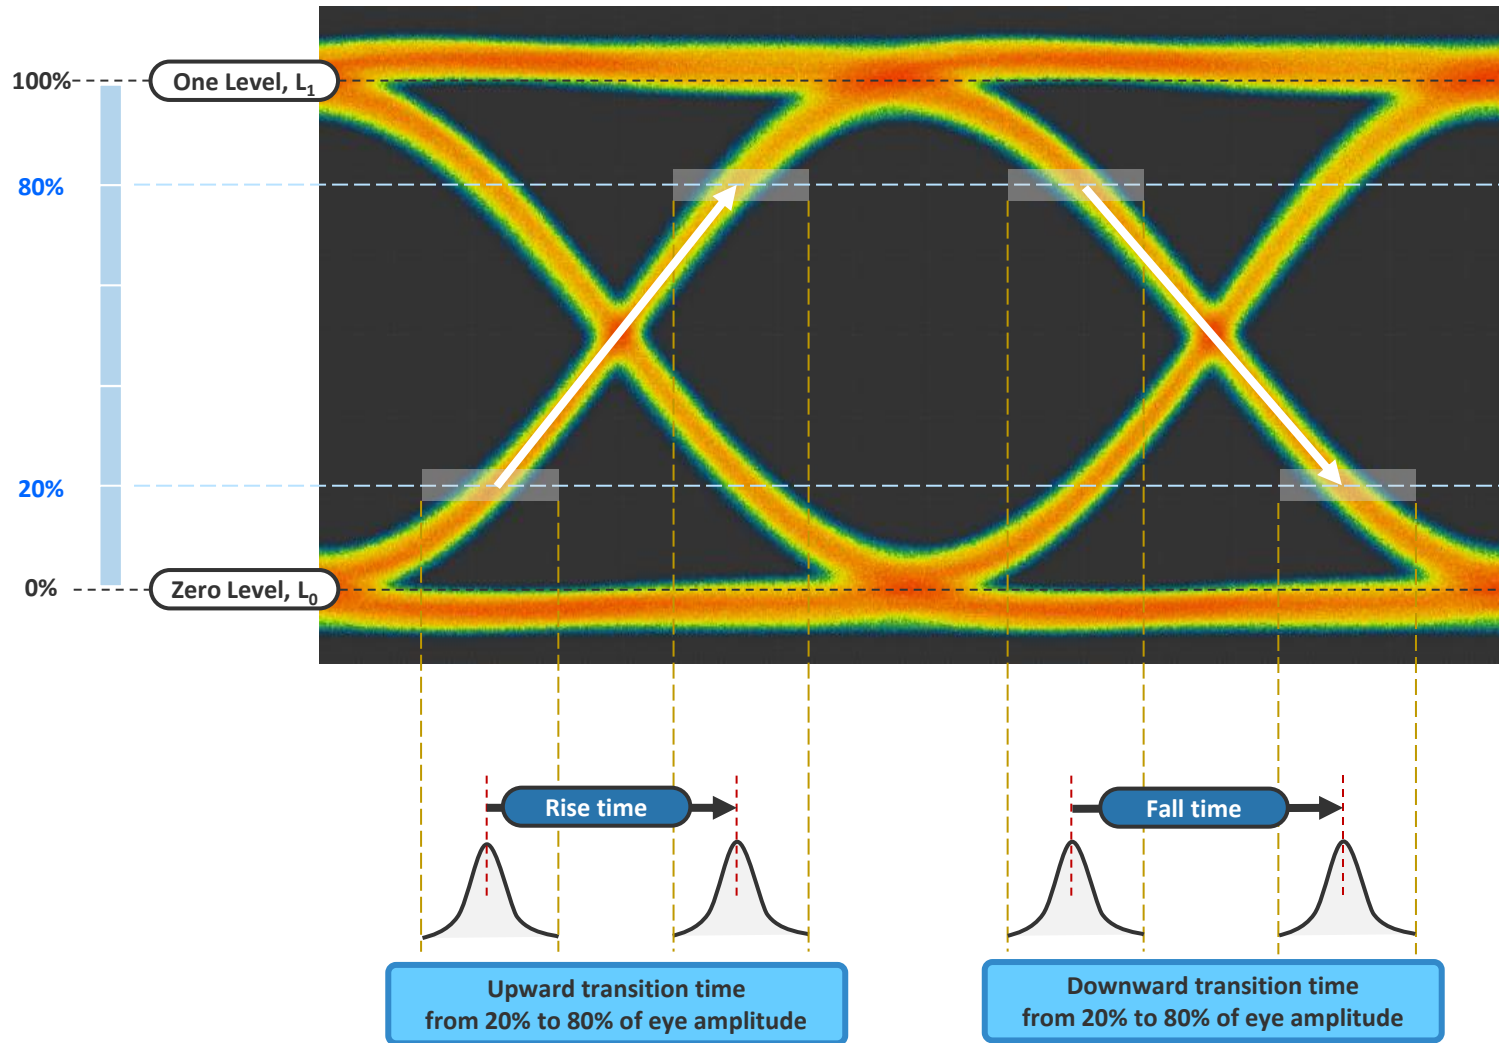

Normal Distribution & Standard Deviation (σ)

Normal Distribution & Standard Deviation (σ)

Peak-to-Peak Jitter, $Jitter_{pp}$

Full width of timing histogram @ crossing point

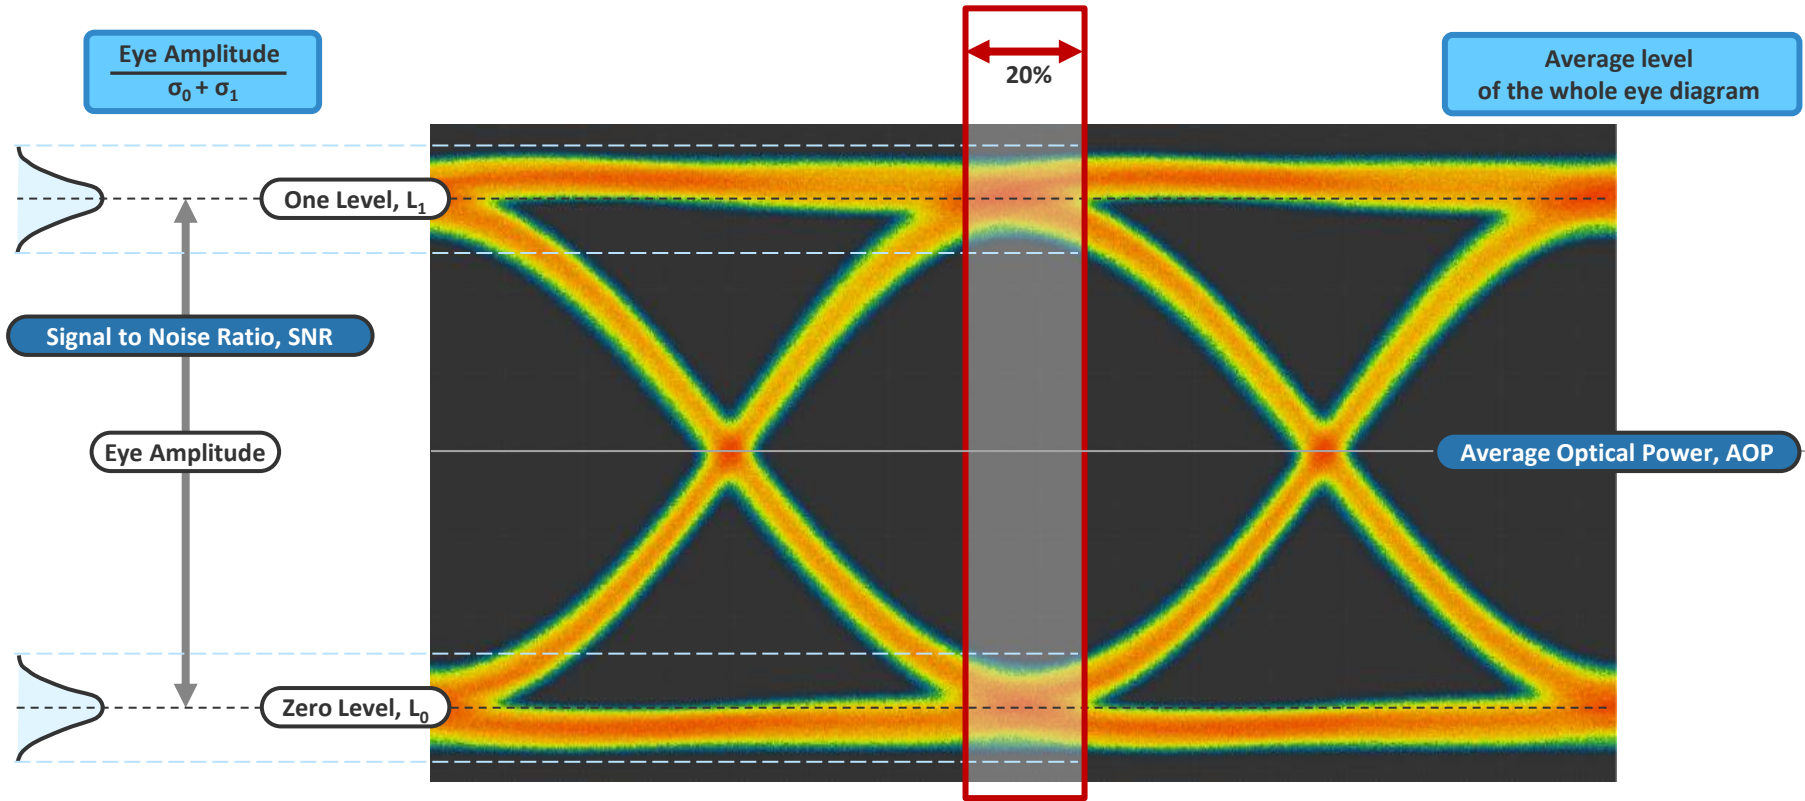

RMS Jitter, $Jitter_{RMS}$

One standard deviation width of timing histogram @ crossing point

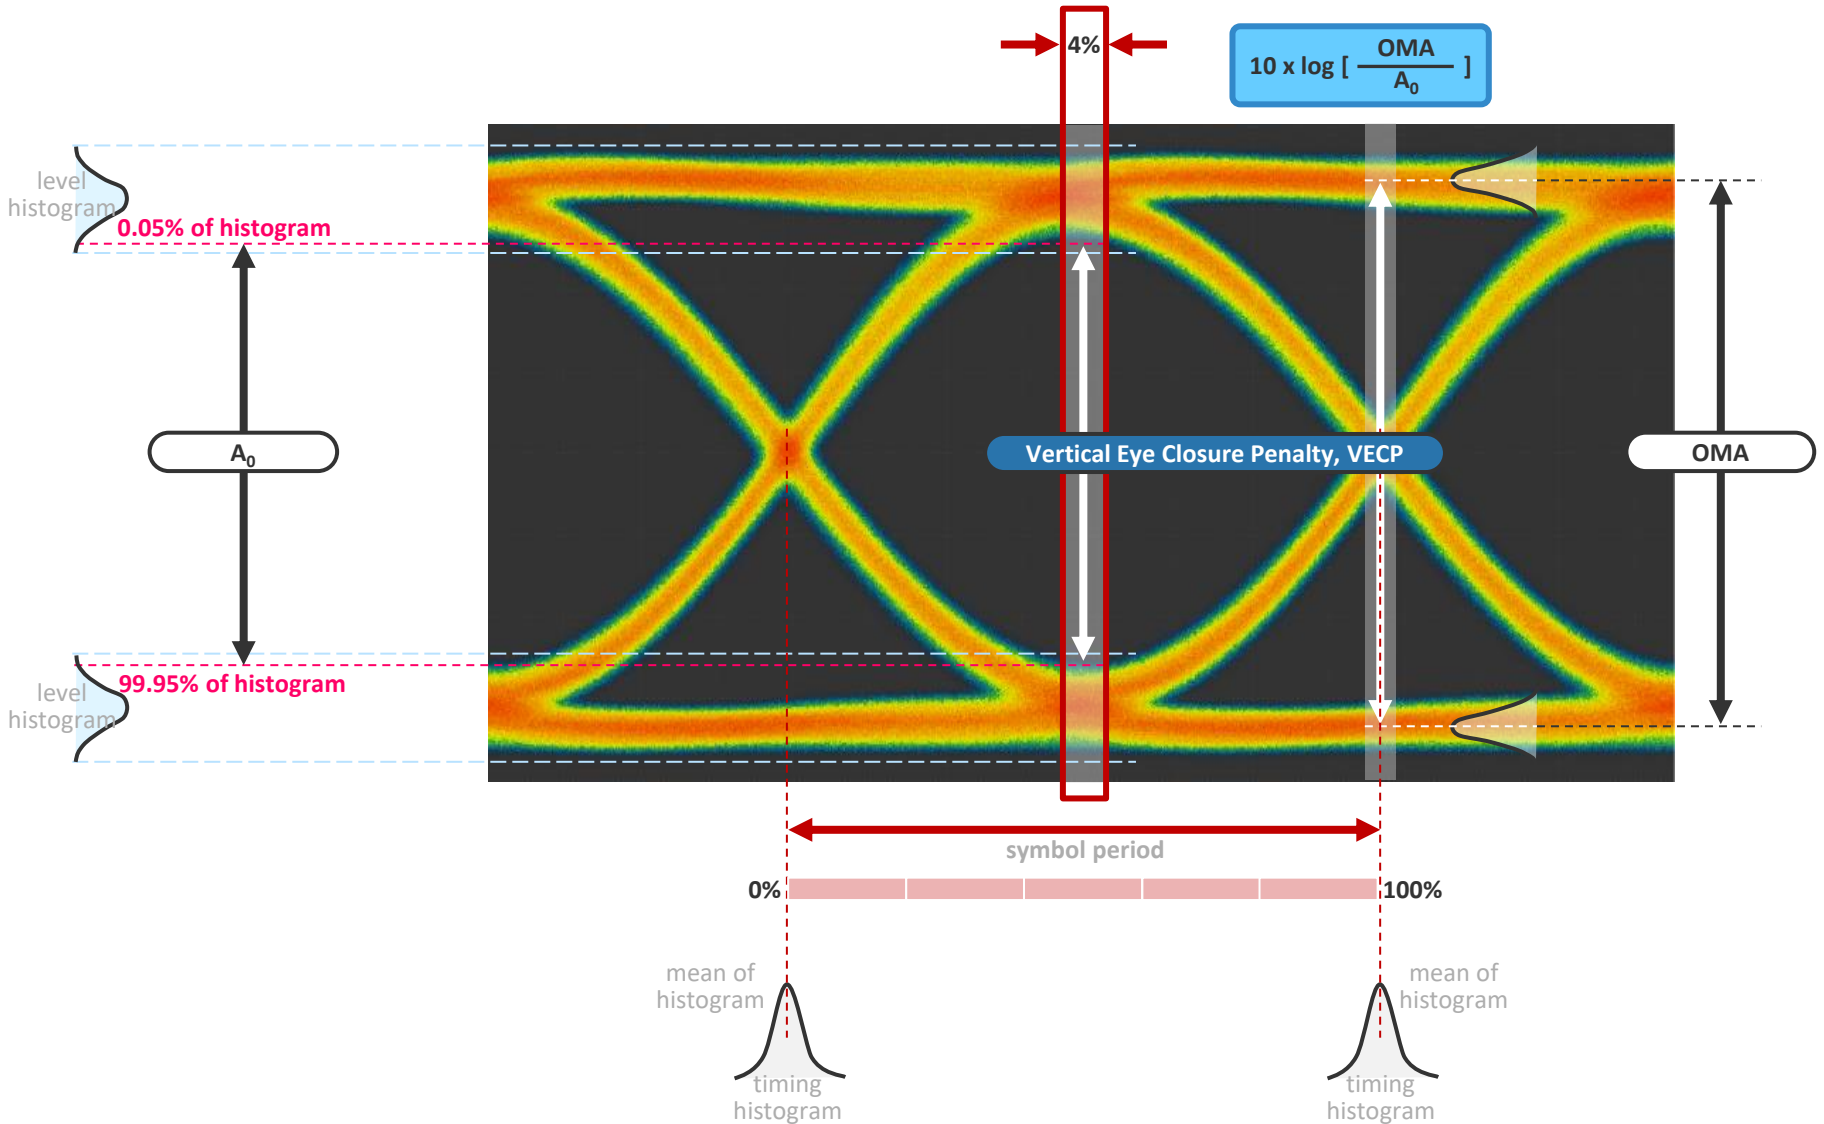

*Before ER measurement, perform dark current calibration.

Normal Distribution & Standard Deviation (σ)

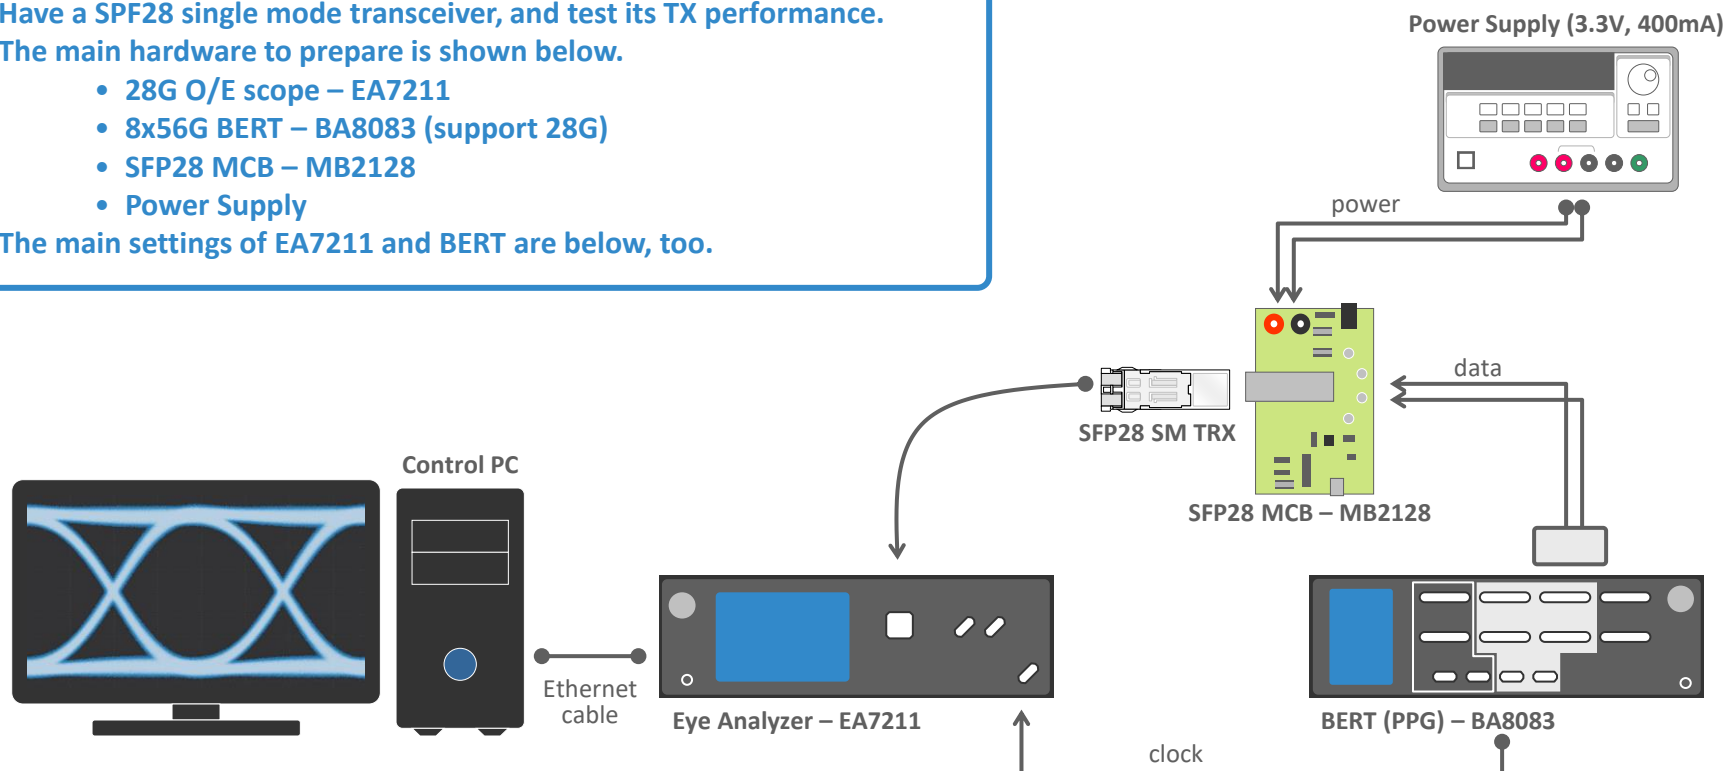

Appendix A – Example of Hardware Configuration for TRX Test

Have a SFP28 single mode transceiver, and test its TX performance.
The main hardware to prepare is shown below.

- 28G O/E scope – EA7211
- 8x56G BERT – BA8083 (support 28G)
- SFP28 MCB – MB2128
- Power Supply

The main settings of EA7211 and BERT are below, too.

Settings of EA7211 – 28G O/E Scope

Channel Type = 1310nm
Modulation = NRZ
Symbol Rate = 25.78125GBd
Clock Ratio = /8
Acquisition Type = Single
Waveform Number = 1K (1,000)
Color Scheme = Color Grade

Settings of BA8083 – BERT

Mode = Basic
Modulation = NRZ
Symbol Rate = 25.78125GBd
Clock Ratio = /8
Test Pattern = PN31
Amplitude = 600mV

↔
The settings should be the same.

Appendix B – Dark Current Compensation*

*It is recommended to perform dark current compensation every 30 days.

Procedure of Dark Current Compensation

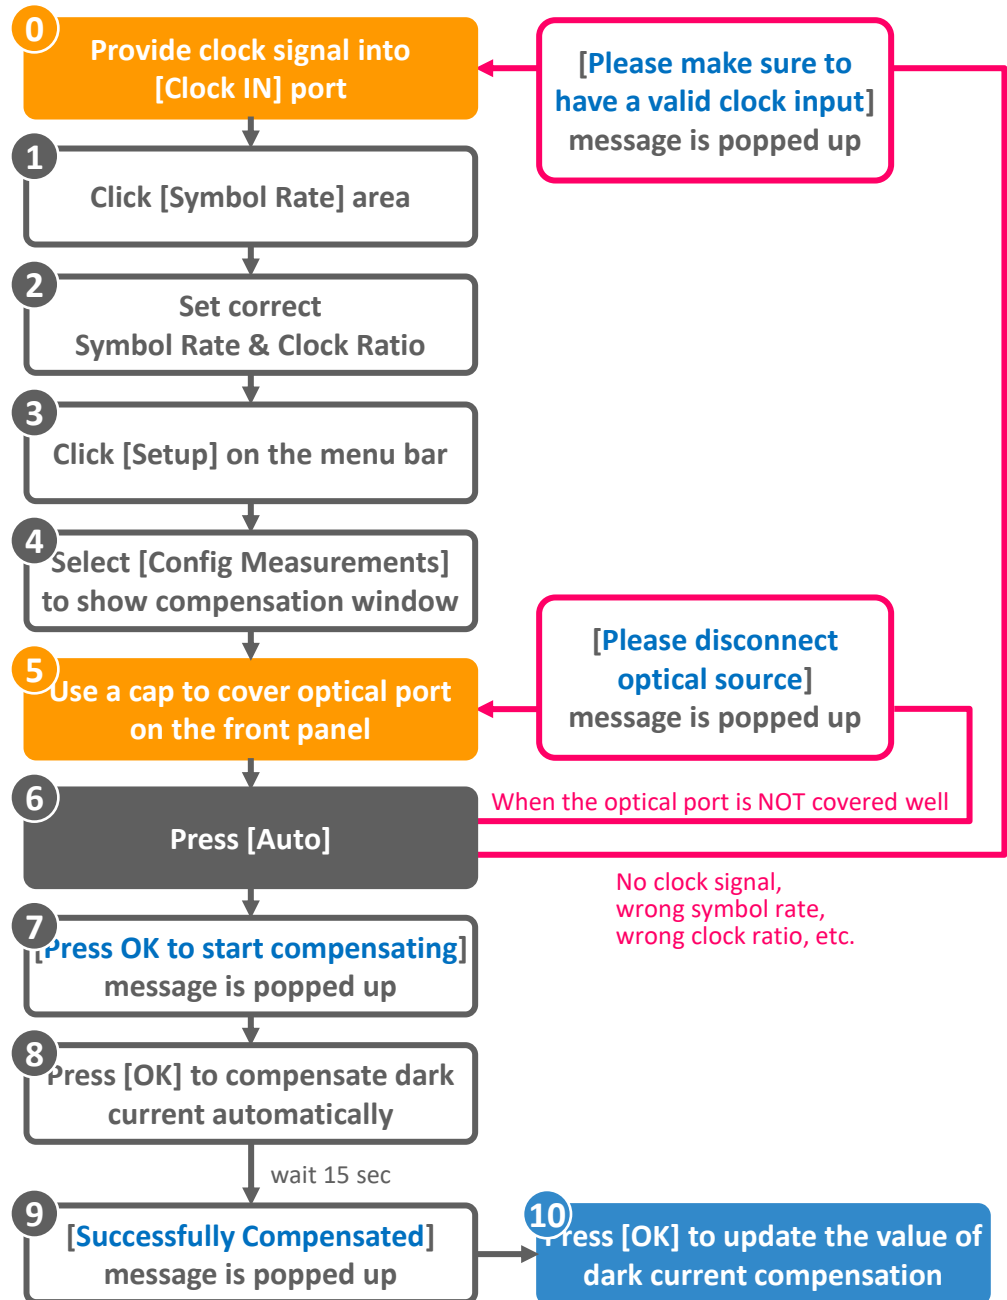

Provide clock info

To open window of dark current compensation

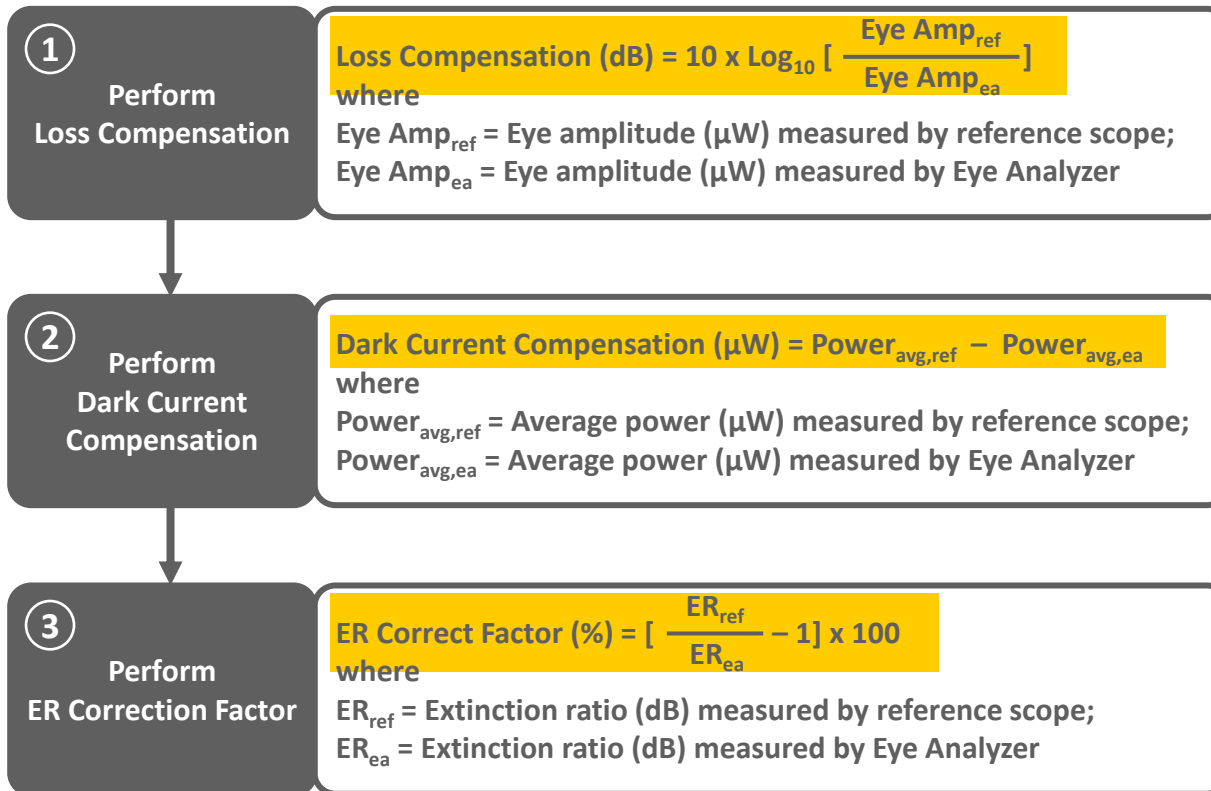

Run compensation automatically

Appendix C – How to Align EA with Referred Scope

When users want to make EA complied with some reference scope, here are 3 steps to compensate the difference between EA and the reference scope.

Appendix D – One More Step to Test High ER TRX

When transceiver ER is $\geq 5\text{dB}$, we perform one more step to keep accurate measurement by insertion of a 1.5dB attenuator.

ER $\geq 5\text{ dB}$

- a. Click [Setup] on the menu bar
- b. Select [Config Measurements] to show compensation window
- c. Input 1.5dB on [Loss Compensation]

Appendix E – Display Resolution Matters

1920x1080 display provides more information and details. It is recommended to use full HD display.

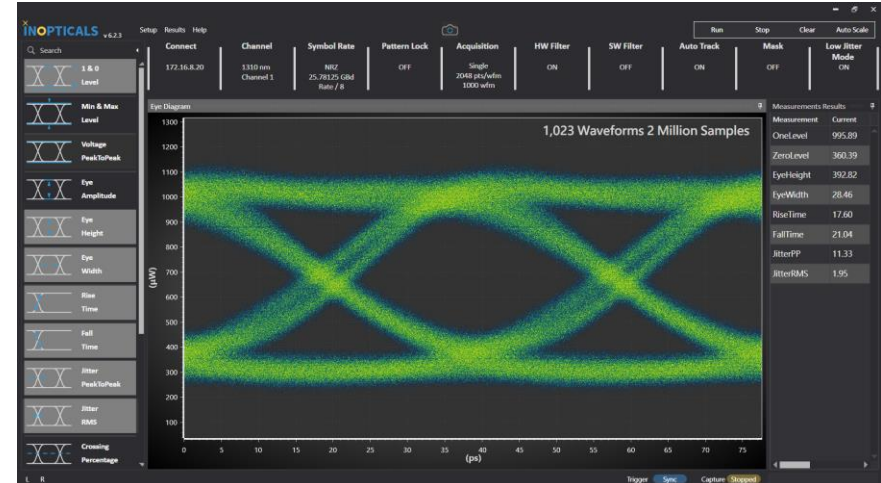

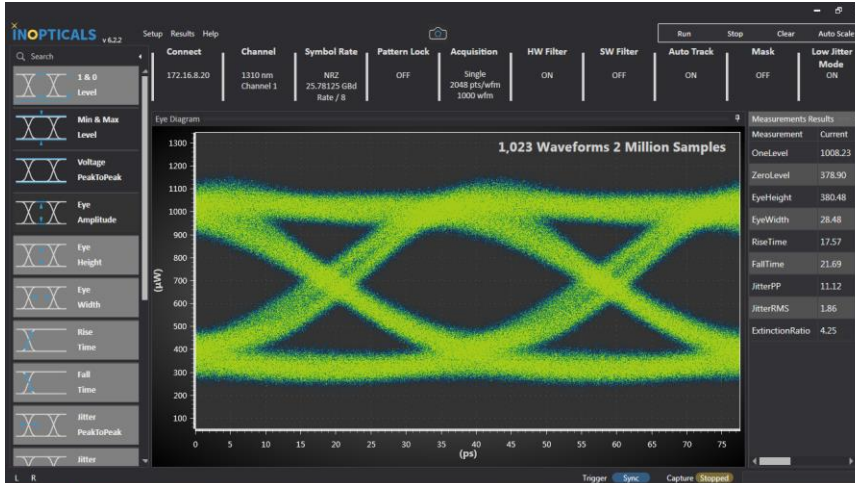

Minimum Requirement of Display Resolution

1366x768

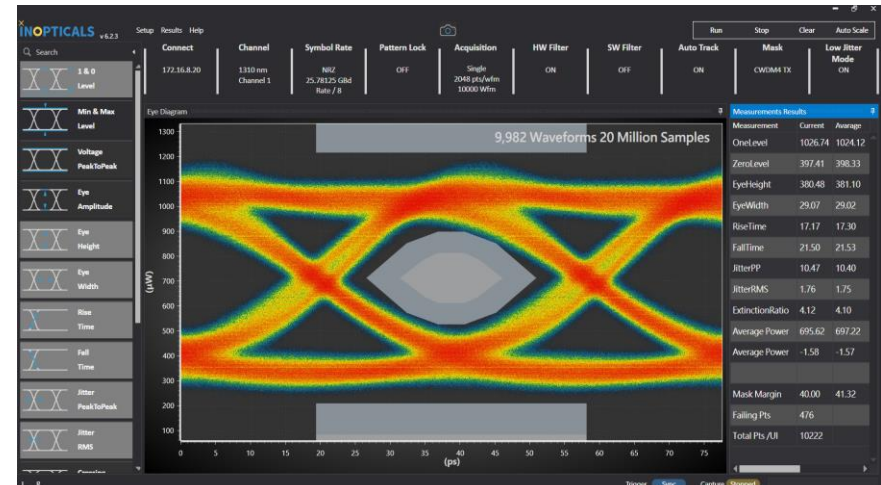

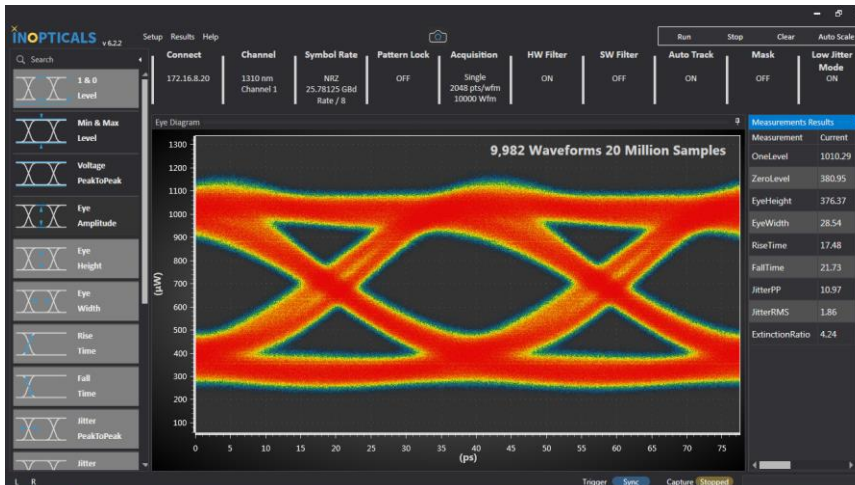

Recommended Requirement of Display Resolution

1920x1080

1,000 waveforms

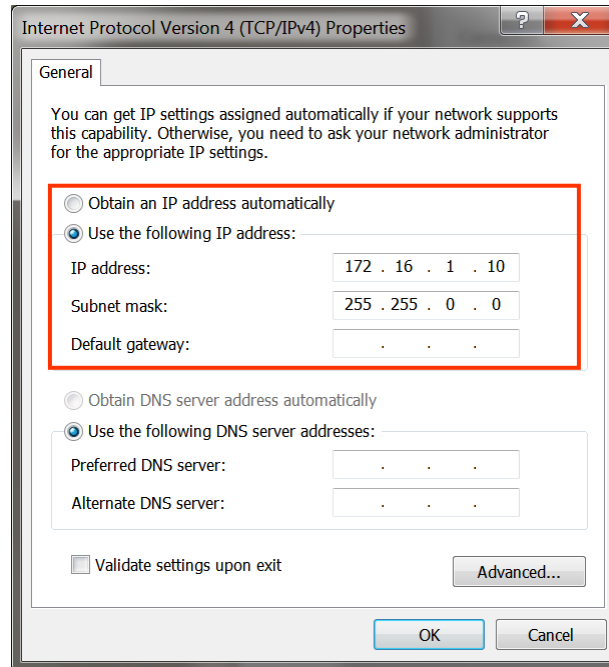

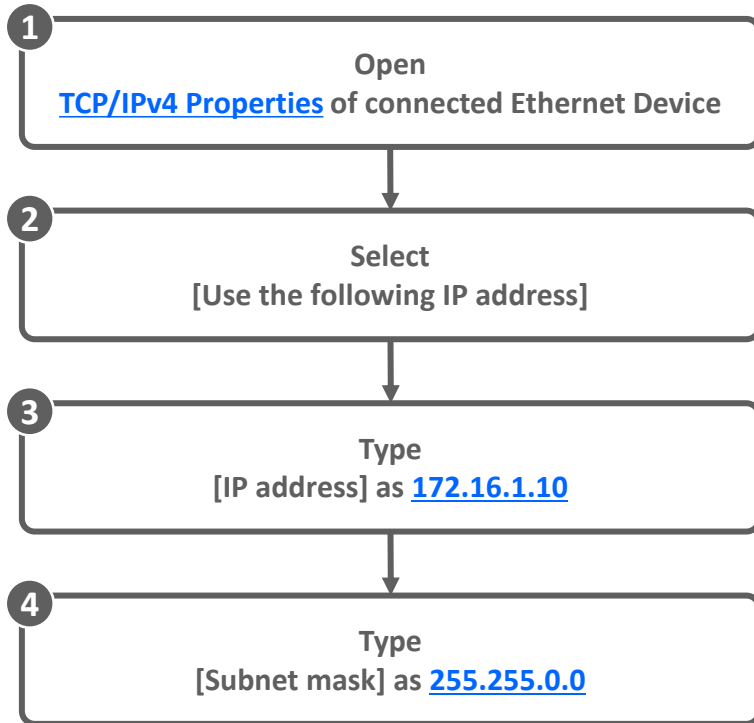

10,000 waveforms

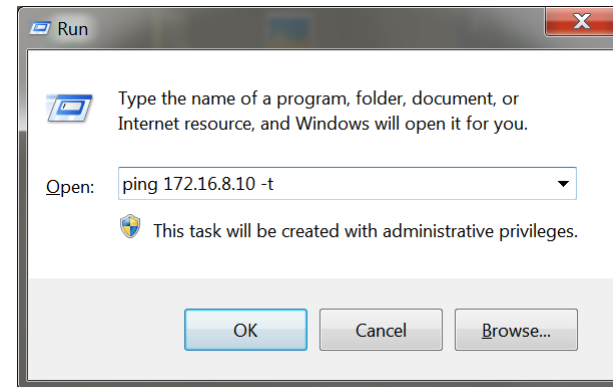

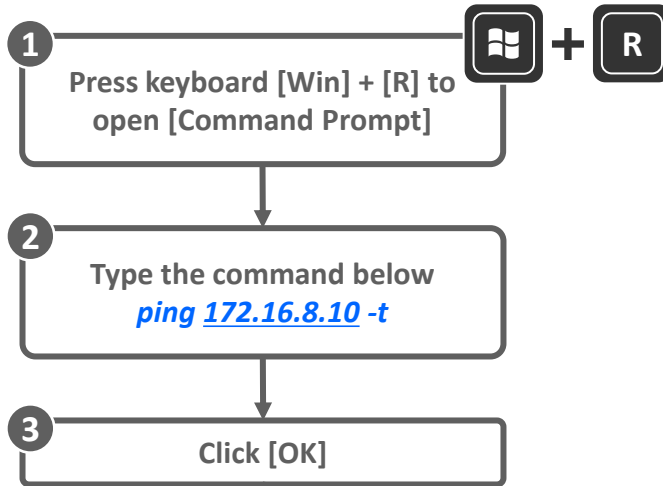

Appendix F – Set IP on Control PC

The IP address of instrument is 172.16.8.xxx (ex: 172.16.8.10)
Therefore, we set the IP Address of control PC as 172.16.yyy.zzz (ex: 172.16.1.10)
and set the **Subnet Mask** as 255.255.0.0

When users want to check IP settings is correct or not, can ping the instrument.
If getting reply less than 3 ms, the connection is correct.
If NOT, there must be something wrong.

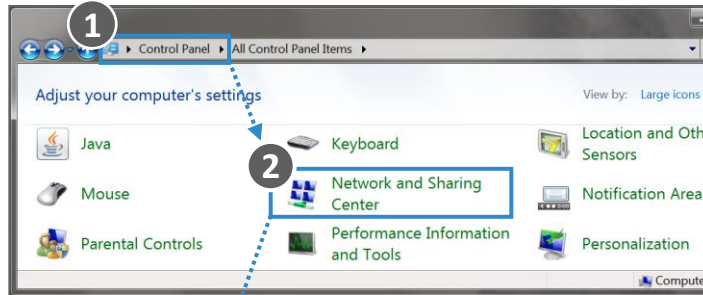

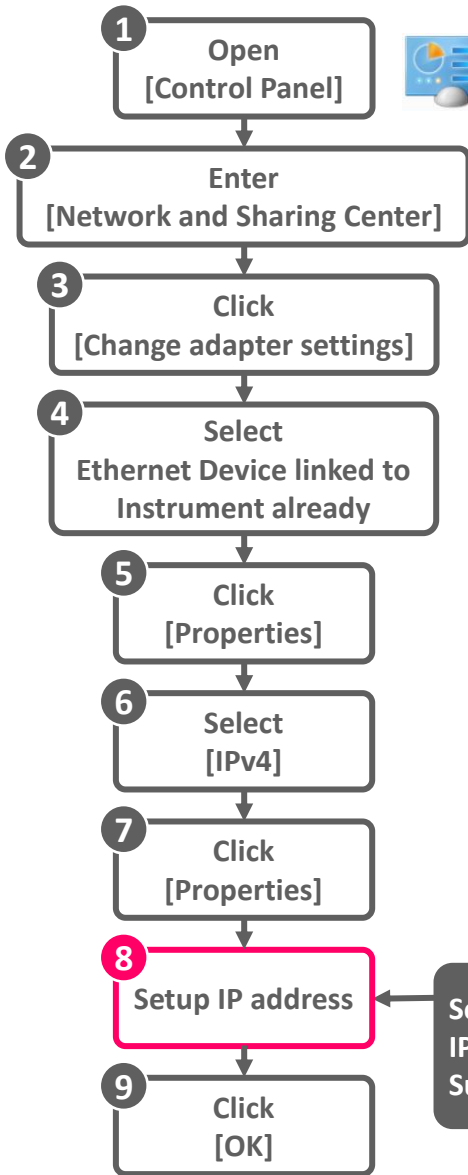

well
connected

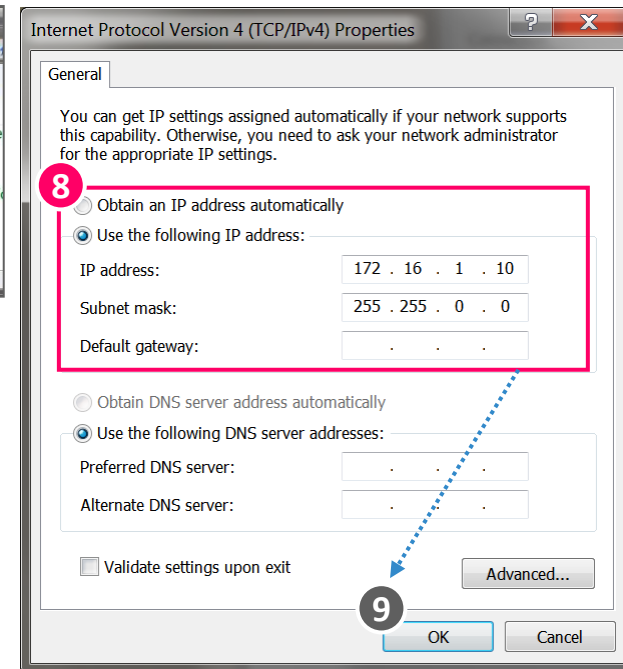

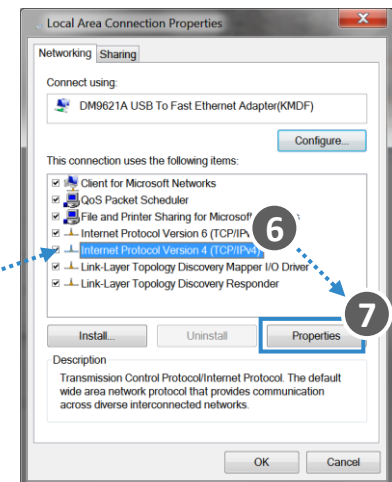

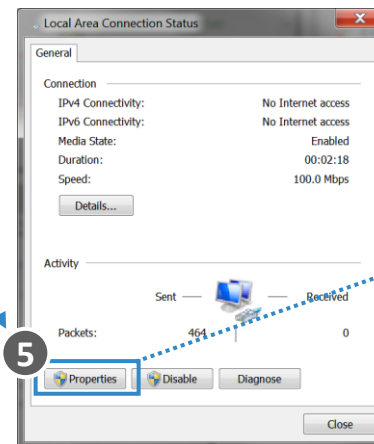

disconnected

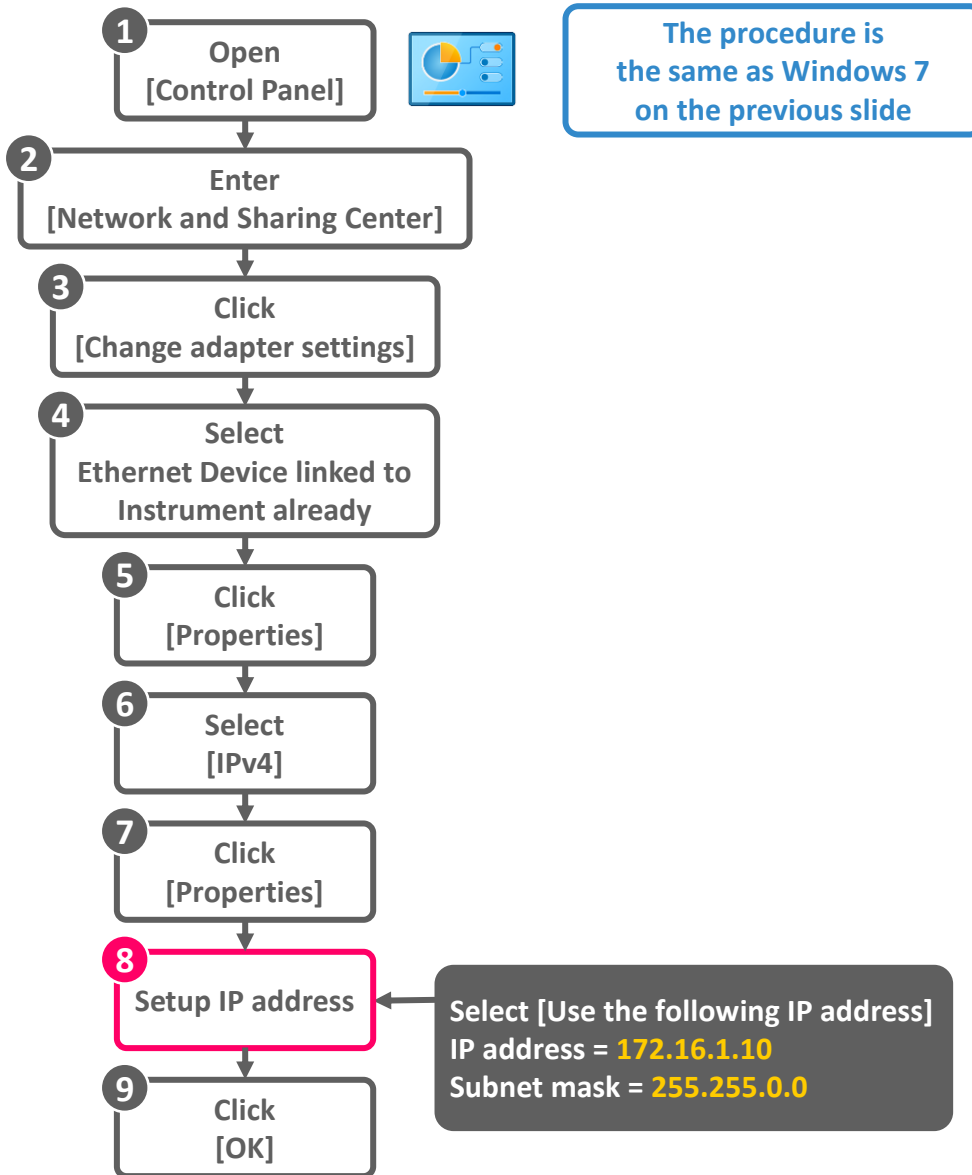

Procedure to Set IP Address on Windows 7

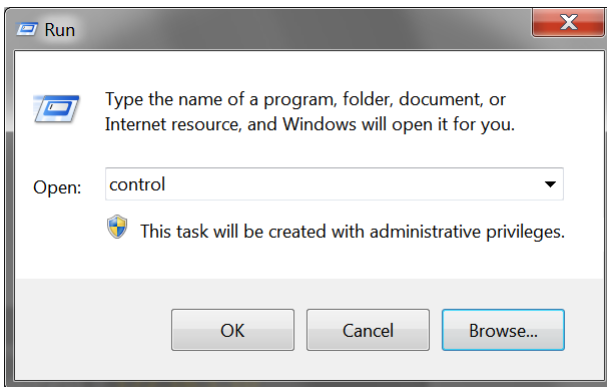

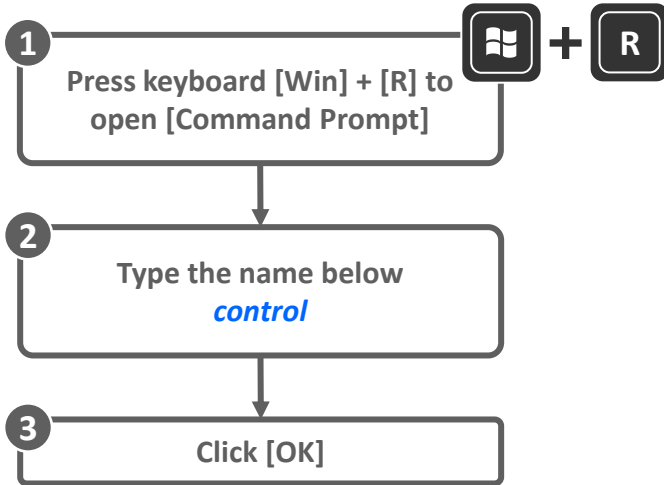

Select [Use the following IP address]
IP address = **172.16.1.10**
Subnet mask = **255.255.0.0**

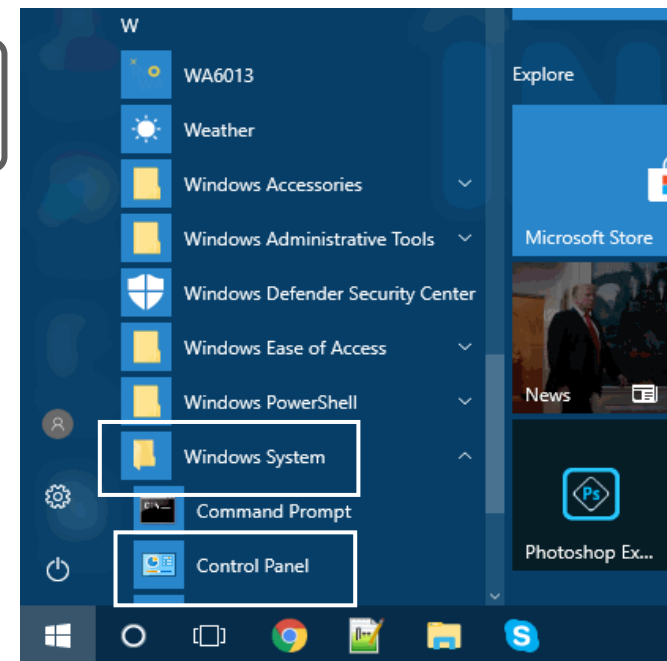

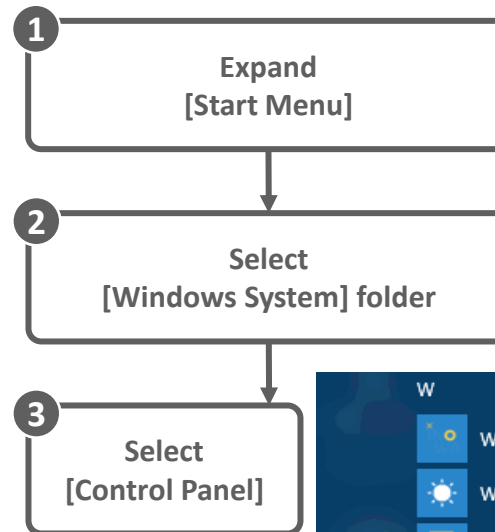

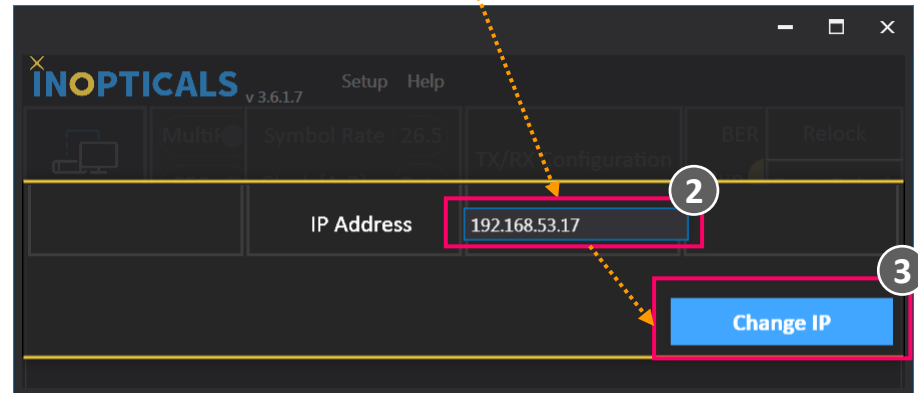

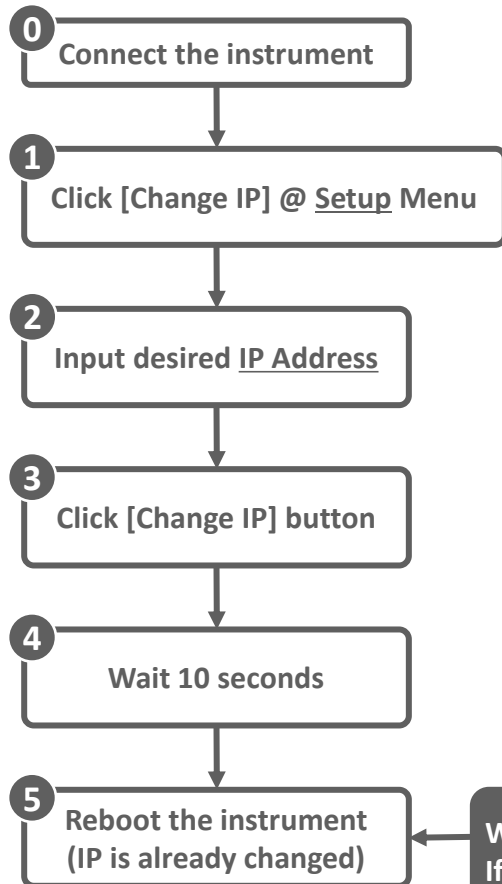

Windows 7
Windows 10

Windows 10

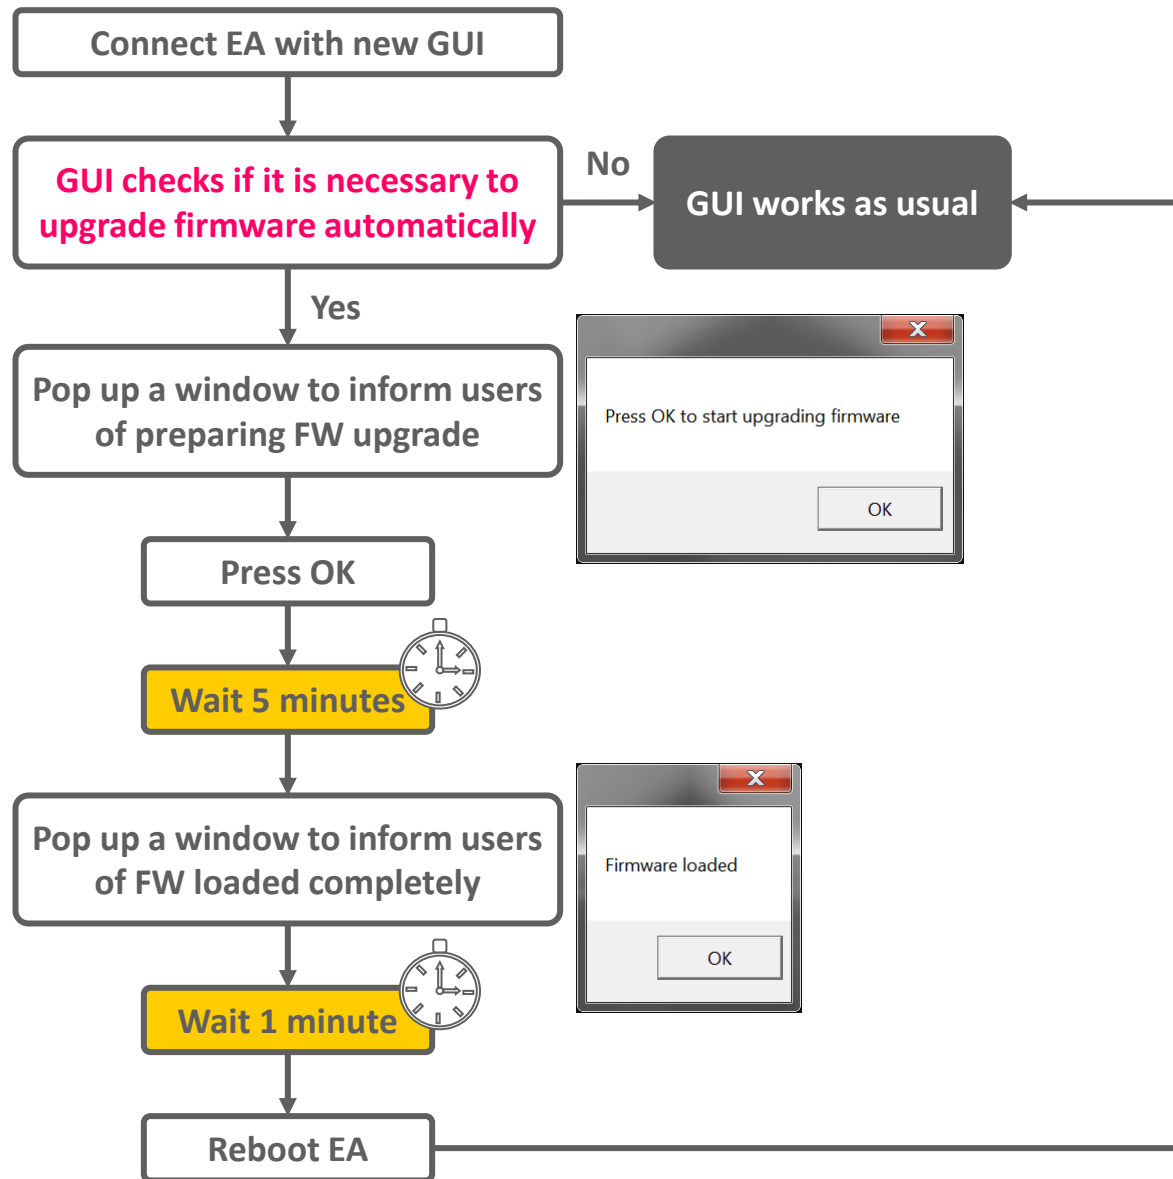

The tool of changing instrument's IP address is already integrated in GUI.

When users want to check IP is changed or not, can ping the instrument. If getting reply, the IP is changed. If NOT, IP is not changed successfully.

Appendix G – Firmware Upgrade

Appendix H – Tune Eye Diagram Scale

Tune Scale of Eye Diagram

Step 1.

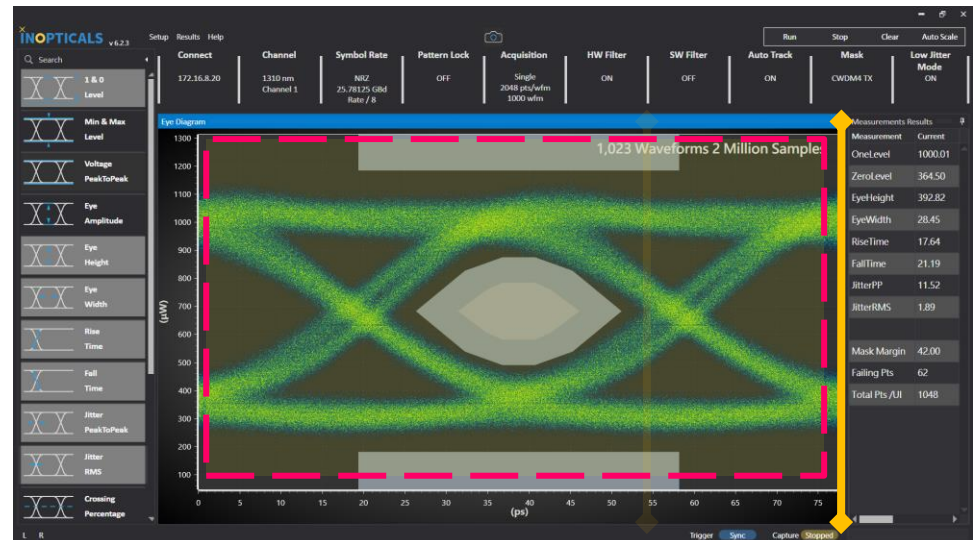

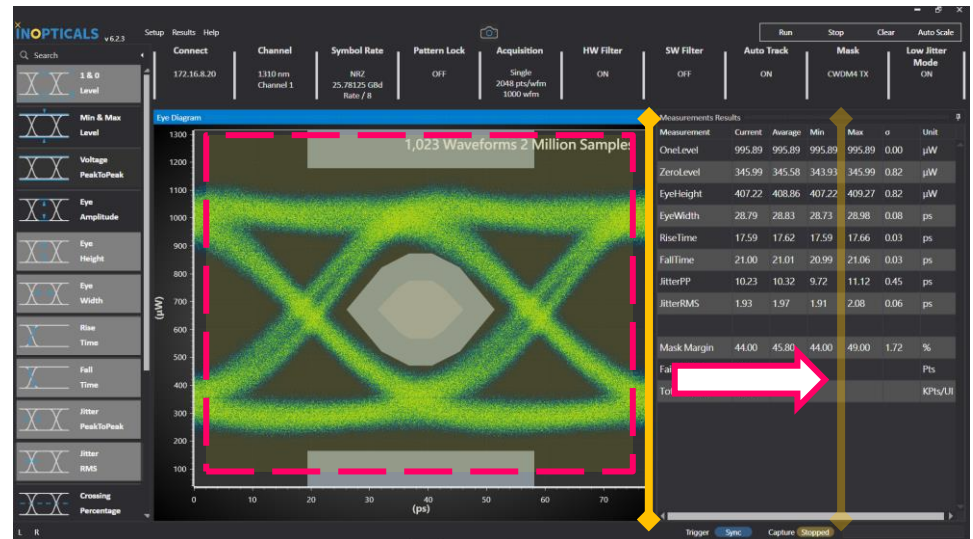

Use mouse button to drag the right edge of eye diagram

Step 2.

Move mouse rightward (or leftward)

Step 3.

Release mouse button to take effect

FUTURE IN LIGHT
